COMMENTS TO AUTHORS

The manuscript entitled "Risk factors for mortality in children with Diabetic Keto acidosis from developing Countries" describes that mortality is high in children with Diabetic keto acidosis (DKA) in developing countries like India, Pakistan, and Bangladesh. There is an important issue to create awareness programmes for parents, teachers and physicians to avoid delay in diagnosis of DKA among children. Overall, this is a well written study. The only comment is that authors need to add caption in each paragraph. The caption will help us to understand the manuscript.
