<input type="checkbox"/> Grade E: Poor		<input type="checkbox"/> No records	<input type="checkbox"/> Major revision

### COMMENTS TO AUTHORS

This is an interesting review on hypoglycemia in diabetes patients. The authors review especially the affect of antidiabetes medication in type 2 diabetes on the emergence of hypoglycemia. In a second main section they review underlying factors. The review is clearly written. There are only a few minor suggestions: ? The only comment regards the title: the word 'etiology' might not be correct. ? It is advised to include a list of abbreviations. The abbreviation 'NPH' in NPH-insulin is not explained. ? page 8-9: 'glimepiride was the most frequently prescribed drug in SU[33].': this statement is not clear. ? The english language is fine. The only recommendation is to check the use of 'was' or 'were', which might be better 'is' and 'are'.
