COMMENTS TO AUTHORS

1) General comments The scientific contents of this manuscript accord with World Journal of Diabetes scopes. The topic of the manuscript is interesting and important. The manuscript is well organized and clear. The cited references are relevant. I support the acceptance of it in revised form. My main suggestions: - It should be more emphasized that the cited studies all used only a small number of samples. - It must be also detailed that the omission of foods of animal origin may be adverse effects. 2) Minor comment: In Figure one: The abbreviations (for example CVD, SLA) should be given in the figure legend.
