COMMENTS TO AUTHORS

It is important to understand the prevalence and prevention of type 2 diabetes in the population of Asian American. The prevalence is comparable in Asian American with other populations of Americans. However there are some differences due to the different culture background of different sub-groups of Asian American. Therefore, it should not be simply to translate the Diabetes Prevention Program to Asian American, stronger study designs and attention to several key methodological considerations with concerning the characteristics of different sub-groups of Asian American. This is a good paper, but the format of references in the reference list is needed to correct to the request by WJD.
