### COMMENTS TO AUTHORS

Diabetes exerts a negative effect on patient's sleep quality. Thus, this review article is going to article outline the various factors leading to impaired sleep quality among diabetics and delineates how individual factor influences sleep. Also, it discusses potential interventions and lifestyle changes to promote healthy sleep among diabetics. Overall, it is an interesting report. But I like to give the following comments. 1. Abbreviation of diabetes mellitus as DM was not generally used in this article. Please check it. 2. Neurotransmitter(s) relating to sleep changed in diabetic condition were not discussed. Why? 3. One figure showing the brief summary for this article will be helpful. 4. Treatment of sleep disorders in diabetic patients is the same as others or not that seems useful in addition. 5. Conclusion seems not indicated in brief with novel view.
