### COMMENTS TO AUTHORS

This is an interesting manuscript which updates the current knowledge on diabetic retinopathy screening by telemedicine. Authors review the different techniques, the problems, and the inclusion of different professional figures in the telemedicine for diabetic retinopathy care. They conclude in saying that telemedicine is extremely useful in ophthalmology and has enormous potential, but a guideline for government regulations is essential to be able to increase communication among professionals, in order to improve public health. I have neither major nor minor revisions to propose, except a minor revision of the english language.
