COMMENTS TO AUTHORS

The review: "ENTRAPMENT NEUROPATHIES IN DIABETES MELLITUS" is a good and complete review about this item. Entrapment neuropathies are frequent in diabetes mellitus and suppose an peripheral nerve involvement in this disease. Sometimes entrapment neuropathies can represent the earliest neurophysiological abnormalities and often are asymptomatic. The pathophysiological background of entrapment neuropathies is complex and consequent to altered glucose metabolism. The study is complete about the different presentations, and the options ti treat this complication of diabetes mellitus.

COMMENTS TO AUTHORS

1. There are several places that the authors unnecessarily mention "as discussed in previous paragraphs:" or "as discussed in the following paragraphs" that should be edited out. 2. there many very large and confusing sentences that go on and on. These must be broken down into smaller sentences so that they are less confusing and "WITHOUT DANGLING PARTICIPLES" 3. There are a number of spelling errors that need to be rectified. For example "mononeurites on Page3, need "of" after sort in the last paragraph of Page 5, "od 20.9%" should read "of 20.9%". There are many such error that need to be carefully edited.

COMMENTS TO AUTHORS

I suggest that authors use less abbreviations in this revision just what is classical.
