COMMENTS TO AUTHORS

This is an interesting topic. Consider titles for figures and less explanations. Not always easy to follow manuscript. Please spell out numbers less than 10. Start with positive findings on the results. Great idea about foot checks during dialysis. Watch using pronouns. Consider stronger conclusion and adding of the documentation you discussed. Consider improved interprofessional development as a way to help this issue.

COMMENTS TO AUTHORS

This is an interesting report on the quality of care of the diabetic patients with renal complications. Because the patients frequently attend dialysis, it is reasonable for them to have difficulty to go other clinics. However, the number of patients who had missed annual checkup of eye and foot was relatively small. To further reduce the number of these patients, it is a good idea to develop questionnaire that can be done during dialysis. In page 3 last line but one, "where" may be mistyping of "were".

COMMENTS TO AUTHORS

Mothojakan et al report the findings of a retrospective study of whether foot and eye screening is being done on diabetic patients undergoing hemodialysis. The paper has been revised in light of a previous review and is well written, easy to follow and without any obvious errors or unfounded claims. I think it is ready for publication.
