SPECIFIC COMMENTS TO AUTHORS

The review entitled "Circadian rhythm dysregulation and diabetes mellitus: exploring melatonin’s potential roles in prophylaxis or treatment" summarize the current evidence showing significant associations between circadian rhythm and diabetes, and speculate a

role of melatonin in the management of diabetes. This review addresses an intriguing and important issue: however, the reviewer would suggest some revisions to improve the manuscript. 1) The authors focus on economic burden in the treatment of diabetes worldwide in the second and third paragraph of Introduction. However, this part is unrelated to the topic of this review. The reviewer would recommend to delete descriptions regarding economic burden of diabetes management, or show previous studies reporting the association of circadian rhythm and melatonin with cost-effectiveness of the management of diabetes. 2) When discussing the association between circadian rhythm dysregulation and diabetes, the authors should mention about the impact of sleep duration/quality on glycemic control. The reviewer would suggest that the authors add a paragraph concerning sleep and diabetes to the manuscript. 3) The role of gut microbiota in the etiology of diabetes mellitus has been a focus of attention. The authors stated that gut hormones activity is under circadian control on page 16. The reviewer would suggest that the authors investigate whether there is any relationship between gut microbiota and circadian system, and discuss the association of brain-gut axis with melatonin in more detail. Xu et al. [J Pineal Res. 2017 May;62(4).] reported that melatonin may be effective for improving gut microbiota dysbiosis.

SPECIFIC COMMENTS TO AUTHORS

Well written review. It will be nice if the authors can put a figure outlining the relationship between circadian rhythm changes and its relationship to DM.
