SPECIFIC COMMENTS TO AUTHORS

I have read with great interest this combined ESD method to resect large esophageal lesions. I just have some comments: 1) How important is submucosal injection solution in this technique?. There are solutions with better properties: platelet-rich plasma, hyaluronic acid, etc? 2) Which is the alternative to steroid injection?. Any coverage agent to prevent stenosis?

SPECIFIC COMMENTS TO AUTHORS

The authors have described performing circumferential ESD in a case of superficial adenocarcinoma in a long segment Barrett's esophagus. The case has been well described with excellent images. I have the following comments to make: 1) This case is not novel as this has been well described in literature 2) The authors mention "special ESD techniques". Since this is circumferential ESD, was a single or double tunnel used? 3) Kindly specify the details of the balloon dilatation

SPECIFIC COMMENTS TO AUTHORS

Circumferential ESD for EAC is well documented in literature. This is a good case with detailed description Minor comments: 1. Please correct the grammatical mistakes. There are plenty. Kindly have the entire manuscript proof read. 2. Was a single or double tunnel used?
