## SPECIFIC COMMENTS TO AUTHORS

This is a case report and review about the lauromacrogol sclerotherapy for giant hepatic cist with obstructive jaundice. This reviewer comments as below. Comments: 1. As the authors pointed out, this therapy is worried about high recurrence rate. The authors should show a imaging at 14 months or more long-term after this therapy. 2. p9, line 18. The authors mentioned the safety and efficacy of this therapy. However, I think this is an overstatement since this paper is a case repot.
