SPECIFIC COMMENTS TO AUTHORS

Congratulations to the authors. Very interesting case because it is well described and full of ideas for the possibility of being able to use this technique also in the management of splenic trauma

SPECIFIC COMMENTS TO AUTHORS

Dear author. well done for this nice job, but some points need to be clarified: 1-you said that Surgical treatment was selected based on the anatomic location of the aneurysm, possible rupture of the SAA and the patient's choice hence there are 3 choices A-splenectomy in 50y old male B-Endovascular treatment and C-SAA resection. your choice was SAA resection Why? do didn't mention any base or guidelines. 2-You are Indocyanine green fluorescence imaging for spleen preservation in assessing laparoscopic splenic artery aneurysm resection to detect the efficiency of blood supply to the spleen. You didn't mention the cost of Indocyanine green. 3-The color change for spleen after SAA resection, Is it not enough to detect the spleen infarction? as spleen infarction appears rapidly or a segment of spleen infarction due to its segmental blood supply. Greatings
