SPECIFIC COMMENTS TO AUTHORS

I have read the manuscript carefully. It is an interesting case report from a rare disease. Starting with the abstract HHT is characterized by the presence of multiple arteriovenous malformations (AVMs). Therefore, vasodilatation is not suitable. The mutation analysis results make the case in this patient even more interesting, so it would be more appropriate to evaluate these results as a peer review by a geneticist. The University of Utah has a large mutation database regarding HHT, if possible, it would be appropriate to contact and screen it.
