SPECIFIC COMMENTS TO AUTHORS

The authors wrote a review of gastrostomy for children; including open and laproscopic procedures. In the end, it mentioned robotic methods also. all in all, this review was well organised and clearly expressed; including several laparoscopic methods which are now technical inclination. The aim of this review of gastrostomy insertion in children including indications, contraindications, history of gastrostomy, insertion techniques and complications. It was comprehensively written. There are occasionally minor spelling errors, which I would like to remind the authors to check. Additionally, in the background of it, nasogastric tube feeding portion might be simplified, for the topic of the article was about gastrostomy. The other aspects which should be followed to the journal's require.
