COMMENTS TO AUTHORS

It is an interesting rare case report that could be published.

COMMENTS TO AUTHORS

This paper described the huge abdominal mass, which was proved as an lymphangioma. Unusually huge size of this lesion warranted the publication. 1. It would be better to show the histologic feature for the readers to convince the diagnosis. 2. The patient suffered from severe abdominal pain before the surgery. In some paper, in-corporation of the nerve fibers inside of lymphangioma was blamed as a cause of the severe pain. I suggested to add the description about the presence of the nerve fibers in this lymphangioma.
