COMMENTS TO AUTHORS

It is an interesting case. Few points need to be addressed. 1. It is mentioned "dirty fields in the right upper quadrant" -- not clear what the authors want to connote. 2. Did the patient have any evidence of perforation as suspected on CT? It is not clear. 3. There are many spelling mistakes and English needs to be corrected. 4. References are quite old. Some new if there should be included.

COMMENTS TO AUTHORS

The authors have written a letter to the editors on retroanastomotic herniation of small intestine after a subtotal gastrectomy 14 years ago. There are several issues with the manuscript which mandates major revision. There are several similar publications in the past related to the topic and this paper adds little to the existing body of knowledge. There are spelling mistakes at several places and the references are inadequate.
