## COMMENTS TO AUTHORS

In manuscript "Colorectal cancer risk in hamartomatous polyposis syndromes", the authors reviewed the most important clinical features of the Hamartomatous Polyposis Syndromes, a rare group of genetic disorders formed by the Peutz-Jeghers Syndrome, Juvenil Polyposis Syndrome and PTEN Hamartoma Tumor Syndrome (BRRS and CS), and also their potential to develop colorectal and other neoplasia. This review has a certain reference significance for clinical doctor to evaluate the risk of colorectal cancer and other neoplasia in those patients. Their summarization of recommendations for screening and surveillance of these disease were also valuable for family members at risk. The manuscript was acceptable.

## COMMENTS TO AUTHORS

The present review clearly summarizes the colorectal cancer risk in hamartomatous polyposis syndromes. The paper is well structured and focuses on an interesting topic. 1. In case a patient with hamartomatous polyposis syndrome is diagnosed with colorectal cancer, which operation (extension of resection) is recommended, standard resection or extended total colectomy. 2. Which surveillance diagnostic tool should be used to evaluate polyps in the small intestine?
