COMMENTS TO AUTHORS

In general, the editorial is well written and of clinical relevance. I have only few comments: 1. The abstract should be shortened and more focused on the aim of the editorial. 2. Several reviews are mentioned about hemorrhoidal dearterialization, however, it is not clear whether these studies include also papers where additionally RAR was conducted (which might be the case in some). Please discuss it as well. 3. It would be interesting to add a personal comment about your way to deal with hemorrhoidal disease.

COMMENTS TO AUTHORS

The authors provide usefull information for the methods of hemorrhoidal dearterialization in the treatment of symptomatic hemorrhoids. A kind of concern exist regarding hemorrhoids of 4th degree by using the HELP or the HALL techniques.

COMMENTS TO AUTHORS

The Help procedure is a safe and effective procedure for the treatment of some kind of hemorrhoidal disease. I also think this paper represents an important summary of the correct application of this technique.
