COMMENTS TO AUTHORS

This is the well-written case report of pancreatic SFT. Their pathological diagnosis and summary of previous series are acceptable. No specific comment.

COMMENTS TO AUTHORS

This case report is compactly summarized. The theme is easy to understand. The discussion is clearly summarized for understanding pancreatic SFT using previous case reports. Comments. 1. The tables should be summarized as one table. The prognosis should be described if possible. 2. Fig. 5 and 6. A scale bar is necessary. 3. Discussion, the forth paragraph. What is "Tu-cells"?

COMMENTS TO AUTHORS

Solitary fibrous tumor (SFT) is a rare mesenchymal tumor that typically locates in the pleura. But it can also be found as an asymptomatic mass in other areas, such as the liver, pancreas, peritoneum, kidney and salivary glands. Pancreatic SFTs are very rare as only 16 cases have been reported in the literature. Through this case report, author comprehensively reviews and summarizes the epidemiology, pathogenesis, clinical and imaging manifestations, therapy of SFT. The novelty of this article is a summary of all 16 cases of SFT in pancreas which have been reported. The defect is not smooth enough in text. In conclusion, this article can be considered for publication as a case-report. Sincerely thanks for invite me to review this manuscript.
