COMMENTS TO AUTHORS

I read with great interest the manuscript entitled "Perinatal Risk Factors in Newborns with Gastrointestinal Perforation" by Prgomet et al. the manuscript is well written and important in its field. However, the monocenter nature of the study determines a low number of investigated individuals, therefore limiting all the conclusive statements based on the statistical analysis. A comparative analysis with other Centers might be of interest and improves the potential scientific study. Some ortographycal and grammatical errors have been found throughout the manuscript.
