SPECIFIC COMMENTS TO AUTHORS

The present work was undertaken to review the characteristics of the tumor vasculature and the role of TECs in different stages of colorectal cancer and immune remodeling, as

well as to discuss the biological effects of vascular endothelial growth factors and their receptor family as angiogenesis regulators and emphasize the clinical implications of TECs in clinical treatment. The work is of high interest, since CRC is the leading cause of death among cancer patients worldwide. The m/s is well-written, covering all relative issues and it can be accepted for publication, after correction of some typo errors, as follows: Line 178: malignant Line 207: mainly Line 237: protein kinases
