SPECIFIC COMMENTS TO AUTHORS

1. According to the ICMJE rules, the description of “first case” is not recommended, since this statement is difficult to prove. Better to remove “the first” and replace it with “a”. 2. Line 80: replace “whereas there is” with “although there was”. 3. Line 81: Not to mention being the first case. 4. Line 82: “This case complained of severe diarrhea caused of ischemic colitis due to IMAVF and other fistula may be lethal complications causing massive bleeding” is difficult to understand. Change “case” to “patient”. Divide the sentence into 2. Replace "of" by "by". 5. Line 95: metastatic colorectal cancer (mCRC) should be spelled out in its first mention. 6. Line 97: describe which type of hypertension 7. Line 118: a comma is missing after “progressively”. 8. Line 169: the description of the embolization procedure is too short. The sizes and models of the micro springs used are not described, nor is the microcatheter utilized to access the AVM. 9. In the case of an AVM, what is the reason for not using a liquid agent? Glue? 10. Line 194. I suggest replacing “English articles” with “articles available in the English language”. The ideal would be to mention the databases consulted. 11. Line 249: “We report on the first case” 12. Line 365. In Table 1, it is necessary to refer all authors of the 1st column according to the numbering of the References. It is essential to mention the year of publication. In general, the Case Report is well written, with some pending translations. Despite focusing on the diagnosis and evolution of the case, a little attention should be paid to the embolization technique and possible methods to reduce the chance of colon ischemia.
