<input checked="" type="checkbox"/> Grade B (Very good)	<input type="checkbox"/> Grade B: minor language polishing	<input type="checkbox"/> Existed	<input type="checkbox"/> High priority for publication
<input type="checkbox"/> Grade C (Good)	<input type="checkbox"/> Grade C: a great deal of language polishing	<input type="checkbox"/> No records	<input type="checkbox"/> Rejection
<input type="checkbox"/> Grade D (Fair)	<input type="checkbox"/> Grade D: rejected	<input type="checkbox"/> Existed	<input type="checkbox"/> Minor revision
<input type="checkbox"/> Grade E (Poor)		<input type="checkbox"/> No records	<input type="checkbox"/> Major revision

## COMMENTS

### COMMENTS TO AUTHORS:

This article is interesting review regarding GIST. It summarized well about the gist of history about GIST. I read this with great interest and thank you for author's contribution. Comments 1. Small GIST of stomach could be managed conservatively with regular surveillance; however, endoscopic resection would be another option. There are several reports regarding these results. Please add this statement to the 'Management' section with some references. 2. Also laparoscopic or open resection could be TOC in larger (>2cm) GIST with malignant potential. Recent studies also show that combined modality (laparoscopy + endoscopic resection) would be good treatment modality in some patients, who had tumor at cardia or high gastric body.
