## COMMENTS TO AUTHORS

The paper is good and complex. The authors thoroughly explained the problem of modulators affecting the immune dialogue between human immune-and colon cancers cells as a review. This paper is a good connection between basic research and clinical application. This review paper deserves to be published in World Journal of Gastrointestinal Oncology.

### COMMENTS TO AUTHORS

This review written by Djaldetti comprehensively reviewed the inflammatory events preceding tumorigenesis in general, and on a number of modulators capable to affect colon cancer cell-induced production of inflammatory cytokines by PBMC through an alteration of the immune cross-talk between PBMC and cancer cells. The contents are attractive and interesting.
