ESPS Peer-review Report

Name of Journal: World Journal of Gastrointestinal Oncology

ESPS Manuscript NO: 7237

Title: Identification of the Oncofetal Tumor Antigens that Characterize Colorectal Carcinoma for use in Diagnosis and Therapy

Reviewer code: 02569061

Science editor: Huan-Huan Zhai

Date sent for review: 2013-11-10 19:54

Date reviewed: 2013-12-20 23:59

COMMENTS TO AUTHORS

Identification of tumor associated antigens for the diagnosis and treatment of colorectal carcinoma (CRC) is important. The authors have done some interesting studies in this field. In this manuscript, the authors try to review the data regarding to this topic. There are some reservations about the review, which needs revision: 1 The title does not accurately reflect the major contents of the article. Several sections introduce CRC clinical features and general knowledge in CRC diagnosis and treatment, which are not relevant to the title. And as the manuscript focuses on ADCC, a monoclonals (mAbs) of the colon antigen, but not the whole spectrum of oncofetal tumor antigens, it is suggested to change the title. 3 The manuscript sections are suggested to be arranged following the required information of this journal, such as abstract is needed.
