COMMENTS TO AUTHORS

The overview of the role of antiVEGF agents by Konda et al provides a comprehensive, contemporaneous account of the current state of use and potential future applications of this exciting class of chemotherapeutic drugs in the setting of metastatic colorectal carcinoma. The document is well set out and is easy to follow. A copy of the manuscript will prove to be an important addition to the filing cabinet of any practising oncologist and suitably interested gastroenterologist/ colorectal surgeon. I have no suggestions to make to improve upon the document and its appearance in a gastroenterology journal is suitable as the oncological landscape is fast moving and this manuscript is a welcome addition as a summary of current understanding. I applaud what the authors have achieved and can only imagine the effort taken to distil the published work in this area of anti-angiogenic molecules.
