COMMENTS TO AUTHORS

The manuscript by Steele and co-workers reviews pancreatic cancer microenvironment with a focus on inflammation and its potential clinical applications. This is an interesting and well written review of an important and emerging topic. The relevant literature is cited and discussed. There are some minor comments/suggestions: The abstract could be somewhat shortened/more focused. Table 1 could be organized by i.e. grouping by target and omitting title and reference (PMID is enough to identify). The authors might want to include a short paragraph regarding vaccination. The authors might want to include the study by Catenacci et al. (PMID: 26527777)

COMMENTS TO AUTHORS

This is a well-written review focusing on targeting inflammation in pancreatic cancer and its application in clinical practice. The review is Comprehensive. Only a minor point: The table is difficult to read, and should be shortened

COMMENTS TO AUTHORS

1. Please make it more compact. 2. Additional figures will be helpful for the readers understand the main stream of authors' discription. 3. English needs to be edited again. 4. Importantly, authors are wanted to deal with following issue in revised version of manuscript. -Proposal inflmaation-target oriented clinical practice in treating pancreatic cancer, for example; by suggesting the potential relationship between inflammatory insult abd minimally invasive/ open pancreatectomy, transfusion, postoperative complication, NSAIDs usage as postoperative pain control...

COMMENTS TO AUTHORS

Dear Editor Steele et al. presented a manuscript title as " Targeting inflammation in pancreatic cancer: clinical translation" . Pancreatic cancer is bothersome for a medical oncologist because of the treatment resistance and high mortality. There are many research about the pathophysiology of the disease especially inflammation and tumoral environment. The authors stated on a popular topic so I was excited when I read the manuscript. This manuscript was well written and the authors were very well summarized the literature. All of the actual researchs such as trabectedin, ruxolitinib, PD1/PDL-1 blockage and others were well written. Only there are some grammatical errors in the text. In my conclusion the manuscript may accept after the editing the grammar.

COMMENTS TO AUTHORS

This is a good review for new approaches to pancreatic cancer including target therapy against stromal tissues. PD-1 have made good results for colon cancer, but not in pancreatic cancer (personal communication). The molecular mechanisms for no effects of PD-1 to pancreatic cancer are important. In next time the review may include this point.
