COMMENTS TO AUTHORS

A mainly well-written review paper on a novel topic. Comments; 1. authors should shorten the manuscript if possible and better highlight the clinical applicability of the results. 2. Authors should insert a table explaining the major knowledge and importance of the circular RNAs

COMMENTS TO AUTHORS

The present review by Taborda et al summarized the advances on the biogenesis, properties, function of circRNAs and their roles colorectal cancer. The overall structure is not reasonable, and the length of writing seems tediously. Authors pay more attention to the background information of colorectal cancer and circular RNA, whereas the advances of cirRNA on colorectal cancer seems be neglected,
