### COMMENTS TO AUTHORS

1 The question that this article talked about has clinical reference significance. 2 The results the authors described are not refine. So, they are not enough for supporting the conclusion. 3 In this group of patients, five of the 22 patients(23%) had hepatic steatosis. I want to ask the authors, how about the occurrence in the other kinds of cancer? Whether do they have difference? I think the author should have references to discuss these questions in discussion part. 4 The language should be polished.
