SPECIFIC COMMENTS TO AUTHORS

Thank you for the privilege of reviewing your work. This manuscript is well written. I think the authors had a great report. The authors reviewed the efficacy of celiac plexus neurolysis through echoendoscopy in patients with unresectable pancreatic cancer. 1. Why did not the authors include chronic pancreatitis and biliary tract cancer in their analysis? If the authors reviewed only unresectable pancreatic cancer, I would suggest adding “in patients with unresectable pancreatic cancer.” to their title. 2. Over all, which technique is the mainstream in EUS-CPN recently? 3. What are the strengths of your paper?
