## COMMENTS TO AUTHORS

The manuscript has interesting and up to date information and can be published, but I have some recommendations in order to reconcile information with the results. Introduction 1 – put the definition OF AGA in quotes and replace “a condition in which any extent of columnar epithelium replaces the normal stratified squamous epithelium,” per “a condition in which any extent of metaplastic columnar epithelium that predisposes to cancer development replaces the stratified squamous epithelium that normally lines the distal esophagus” 2 – remove this section “a process commonly referred to as intestinal metaplasia” 3- (Reference 4) mortality is 10%. 4- In patients with early esophageal adenocarcinoma, up to 20% of patients with cancer Involving the submucosa ((ref 8 PG 6 to 20% by sm1 and up to 50% by sm3) will have lymph node metastasis. 5-Page 10 Cryotherapy The phrase "The complete eradication rate was even higher in patients with short-segment disease (97%)" - this data is not in the reference number 30, but in reference 32, soon to follow. In the same paragraph, only one patient developed a stricture phrase in the 21 months of follow-up, the reference contained 30: 3 cases of stricture in the 37 months of follow-up. References– Correcting references 31 and 32 in accordance with the text.
