COMMENTS TO AUTHORS

This review is comprehensive, well written and it covers all aspects of endoscopic management of primary achalasia. Also the authors review the advantages and disadvantages of endoscopic treatment and compare it with surgery. I think that the review is a bit long for the average reader. "Intoduction", " therapeutic management algorithm" and "role of endoscopy in the diagnostic.....of achalasia" sections can be shortened. In the " therapeutic management algorithm" section the authors should explain details about the figures and the proposed algorithms and repetitions about each technique should be avoided.

COMMENTS TO AUTHORS

Thank you for your contribution. The manuscript reflects the present status of the management of achalasia well and is nicely structured including the flow charts. However, there are a few minor issues to be changed. 1. The title includes the phrase "past, present and future", but little is said about the future. Maybe the subtitle is not necessary. The manuscript covers not only the endoscopic management of achalasia but also surgery, although mainly laparoscopic, and medication. How about changing the title to "management of primary achalasia: the role of endoscopy"? 2. There is very little description about the POEM procedure despite that it is gaining enthusiasm all around the world. It is not a "future" anymore, but a "present", although a long-term efficacy is not fully demonstrated yet. 3. There are a few careless mistakes in the spelling.
