COMMENTS TO AUTHORS

This is a well written review of endoscopic treatment for biliary complications of liver transplantation. On page 5 is "isquemic" a misspelling of "ischemic"?

COMMENTS TO AUTHORS

This review article summarized biliary complications after liver transplantation and managements of them. The manuscript is well-written and well-organized even in this current form. However, I think that making minor revisions would make the manuscript more informative to readers. Major comments: Currently, thanks to the advancements in CT technology, most of the hepatic artery-related complications are accurately diagnosed by multidetector row CT without the need of invasive angiography. Therefore, the description, "If hepatic artery stenosis or occlusion is suspected by Doppler US, hepatic angiography is usually indicated before continuing with other tests," in the paragraph titled "Diagnostic approach" should be changed. For some refractory anastomotic stricture, rendezvous technique (PTC + ERCP) is effective to proceed stents beyond the anastomotic stricture. A summarized paragraph regarding this topic is informative to readers. Minor comments: In Page 4, number the paragraphs correctly. In Page 5, Line 27, "ischemic" should be "ischemic." In Page 9, Line 16, "leaded" should be "led."
