COMMENTS TO AUTHORS

Minor points In p7, 1. Mitoses were also detected. ---> Mitoses were rarely seen (<1/50HPF). 2. Actin ---> smooth muscle actin S100P ---> S100 protein 3. Mitotic activity is generally very low in PAMT, as you mentioned, but the Ki-67 labeling index is too high (40%). It needs description of the reason for this unexpected finding within the manuscript.

COMMENTS TO AUTHORS

The paper Plexiform Angiomyxoid Myofibroblastic Tumor of Stomach: A Rare Case is an interesting description of a rare condition of tumor. The case presented here shows that surgical intervention under is successful. However, I would underline that the follow-up time and detail should be mentioned.

COMMENTS TO AUTHORS

Correctly written paper about extremely rare stomach tumor.
