Minor revision

1. What are the liver complications in patients with SARS-Cov2? Should nutritional intervention related to liver complications be added in this review because the focus of this review is metabolic and nutritional triggers associated with increased risk of liver complications in SARS-Cov2?
2. This review is mainly about the risk of liver, but the preface does not mention the content of COVID-19 patients related to liver.
3. Hyperglycemia is a common feature of severe SARS-Cov2 infection. Do severe patients with arterial hypertension, heart disease, obesity, smoking, chronic lung disease and cancer also have hyperglycemia?
