SPECIFIC COMMENTS TO AUTHORS

Dear author. this manuscripts is clear and well organized. What are the original findings of this manuscript? first, the originality of this manuscript: this is a case report about a cavernous hemangioma with multiple satellite nodules. but this case report is special because the author tried to explain the preop imaging with the liver specimen through histologic and immunohistochemistry methods. Second, the authors speculated emphasized that cavernous hemangioma can occur often as a hemangiomatosis. In this case, main tumor tag alongs a lot of satellites. we still do not know the consequences of these two objects. But authors told that the tumors occurred simultaneous at the beginning, not a tumor extension from the main tumor. minor thing to be corrected 1. page 2 case presentation: we report on a 60-year-old man with an unclear liver tumor of the left liver lobe ->(left lobe) 2. page 6 discussion: bevacicumab-> bevacizumab

SPECIFIC COMMENTS TO AUTHORS

Dear editors and authors! The manuscript reflects a well-described clinical case. A thorough assessment of the morphological verification of this rare variant of the tumor is given, taking into account the available information in the literature. The manuscript is of great scientific interest. No additional edits are required, clinical material and discussions are described in a high-level scientific style.
