COMMENTS

COMMENTS TO AUTHORS:

`-Your excellent manuscript is of utmost importance and clinical relevance as it throws light on a frequently faced issue on handling of cases with OHB infection udergoing immunosupression. -Albit this,there are minor corrections that are warranted: 1-In section of Methods,in your statement:or resolved(antiHBs+)/antiHBc+)/HBsAg(+),the last one should be HBsAg(-). 2-As you have mentioned seroconversion in two opposite directions in your manuscript,I think it is appropriate to define the seroconversion after reactivation in the related paragraph in section of results. 3-In section of discussion,the paragraph starting with:Male sex.....in HBsAg(+)cancer patients,should be corrected to HBsAg(-).
