COMMENTS TO AUTHORS

Major concerns: 1. English needs to be improved in a more scientific way. 2. A table comparing devices and techniques in their applications during liver transplantation as well as their pros and cons, and a figure showing their first application, are highly recommended. 3. The conclusion did not show much take home message. Although an ideal device is still lacking, a guideline based on available ones should be given. 4. Since there are already many reviews about similar topic, what makes this review stand out?
