COMMENTS TO AUTHORS

This is very interesting and high quality paper to be published after minor English correction.

COMMENTS TO AUTHORS

The manuscript entitled "Understanding the pathophysiological mechanisms in the pediatric NAFLD: The role of genetics" highlighted an important area in hepatology. Although two hits hypothesis explains some causes of NAFLD, gene polymorphisms also play an important role. In this editorial, three genes polymorphisms (PNPLA3, GPR120, and TM6SF2) have been reviewed. Their physiology and pathophysiology are discussed. The updated two hits hypothesis is clearly shown in Figure 1. It is a good editorial and deserves to be published as it is written right now.

COMMENTS TO AUTHORS

Dear Editor, In this editorial, Marzuillo et al. have reviewed the pathophysiological mechanisms in the pediatric NAFLD dealing with the role of genetics. This is well prepared article, but I can offer the authors to focus on multiple hit hypothesis instead of the two hit hypothesis. Regards.
