COMMENTS TO AUTHORS

The manuscript contains wide range of topics not only about pediatric transplant but also general issues in adult transplant and it's partly informative. However, the discussions for each topic are generally superficial and are not interacted to their clinical experience. For example, the manuscript contains the topics about immune suppressive drugs and even tolerance with stem cell transplant, which usually requires several whole different papers to be discussed sufficiently. Therefore, I recommend that the manuscript should be more focused on a certain topic as authors mentioned in abstract; LDLT and DDLT. It required to be rewritten and reviewed deeply about a single topic with their clinical experience, besides it might contain some other topics just to make the article consistent.

COMMENTS TO AUTHORS

This was a nicely written review article. Please consider to add one table to compare the major difference between pediatric and adult liver transplantation.
