COMMENTS TO AUTHORS

The theme of this review is epidemiology and etiology of HCC focusing on HBV and HCV. The information is adequate, but well-known. 1. Current concepts of mechanism of carcinogenesis of HBV and HCV would make this review more attractive. Brief information of molecular aspects would be desirable focusing on the difference of HBV and HCV. 2. Prevention and treatment of HBV and HCV might reduce the importance of viral infection. On the other hand, obesity and NASH would be the next interest regarding HCC. Brief information would be desirable regarding the mechanism of carcinogenesis of NASH. Difference should be focused from HBV and HCV.

COMMENTS TO AUTHORS

This review is very interesting and useful for the medical world. It provides updated epidemiological data on hepatocellular carcinoma and its etiology. The authors have examined the current and future possibilities of prevention of this type of cancer. Unfortunately, in the article are a few spelling and expression mistakes that should be corrected (ex: The summery; obesity might be play; South-east Asian; There is moderately strong evidence that antiviral therapy that controls HBV infection in HBsAg positive patients.; Combination antiviral therapy helps prevents the HCV and followed by HCC.). Then, I believe that the article deserves to be published.
