COMMENTS TO AUTHORS

Concerns: 1- A method section should be add in the manuscript with the topic distribution of the paper and the description of how many articles were assessed and the inclusion criteria of the references. 2- The topic mechanisms of HBV-associated hepatocarcinogenesis is poorly explained. Maybe a figure could help the understanding. 3- There are syntax and grammar errors in the manuscript

COMMENTS TO AUTHORS

A complete review about this topic. Complete and well done tables summarizing existing papers and reviews. Unfortunately it does not report anything new with respect to recently published analogous reviews.

COMMENTS TO AUTHORS

This is a well written review on the role of nucleos(t)ide analogs in the prevention of HBV-related HCC. It should be published as it stands.
