COMMENTS TO AUTHORS

The mini review on drug and herb-induced liver injury was already subjected to a previous review before I was asked to review. While the authors have tried to incorporate many of the recent advances in the field including up to date references, the quality of the manuscript will be enhanced by considerably by editing by an English language editor. There are countless words that need to be spaced between them. Although the title mentions drug and Herb-induced DILI, the information/details on HILI appear to be inadequate. By contrast drug-induced liver injury is more than comprehensively covered. The second sentence under "signals emerging from observational studies" is too long and needs to be broken down to two or more sentences for clarity purposes. Page 9, end of second paragraph "Follow-up is also.....experienced DILI" needs to be referenced.
