COMMENTS TO AUTHORS

This is an interesting review by Coppla et al. The author have identified an important health care problem in developed countries flooding in immigrants. It provides informative data to health care providers. The paper is well written and carefully analyzed. Specific comments: 1. Please insert space between words throughout the text. 2. Table 2. Greece instead of Creek. Also to sort the studies either by date published, or study type would much easier for readers to grasp the information presented. 3. We recommend the cite and discuss the recent published work by Chao et al [<http://www.ncbi.nlm.nih.gov/pubmed/26078568>], highlighting similar problems in the US, where authors noted the importance of primary care provided in screening of HBV in immigration population.

COMMENTS TO AUTHORS

1. This issue is of clinical and social value. Because immigrants make the situation of prophylactic, diagnosis and treatment of HBV infection in the host county being more complicated. 2. It is of great significance that the author put forward some valuable suggestion for solving this problem. 3. There are lot of errors of compose type and word spelling that impede smoth reading. For example, in page 6, line 14, the penult word "shave" should be "have".

COMMENTS TO AUTHORS

1-During recent decades the western countries have tight policies against HBV,HCV,HIV- carrier for immigrants and refugees. 2-You was speaking more about social aspect of this problem.
