COMMENTS TO AUTHORS

In the review article of Dr. Rognant the connection of acute kidney injury to chronic liver failure is reviewed. The topic is of great clinical importance. The format of the manuscript is acceptable for WJH. The review is well written, uses up-to-date references, the table and figure help the understanding. Excellent work. I suggest to accept it for publication in its current form in WJH.

COMMENTS TO AUTHORS

In principal title, we suggest adding "chronic liver disease," as the author refers to the renal complications in cirrhotic patients. The short title is appropriate. In "Summary", it would be desirable to place the abbreviation AKI early on after "Acute kidney injury". Also in the abstract, the author does not explain the new diagnostic criteria to detect AKI and the author do not leave a clear message to the readers. Manuscript sections are well organized and supported in the literature. References are appropriate and current. The tables are necessary and presented in a clear way. The only figure of the manuscript is not numbered.

COMMENTS TO AUTHORS

Reviewers' Comments to Author: This review focus on new criteria about the prevention and treatment of general AKI in cirrhotic patients, which should be useful in optimising the management of AKI. The new diagnostic criteria about AKI should be popularized and worth to be published. However there is few problem in this manuscript. Major 1. In Abstract and Introduction, acute kidney injury (AKI) appeared for the first time.
