COMMENTS TO AUTHORS

It is a nicely written review paper on new HCV treatment. Some figures e.g. bar charts showing the results of different trial would be useful to readers.

COMMENTS TO AUTHORS

This review article summarized the antiviral therapies for chronic HCV infection with cirrhosis. The contents are interesting, however, there are some issues to be changed as followings. Comments;

1. In general, the article mentioned only the clinical study abstracts. The readers should have interests on how severe the disease condition would be the limit of anti-HCV treatments. In the paragraph of explaining the treatment results of HCV in liver cirrhosis patients, more detailed explanation for the liver reservoir function related data and efficacy or adverse events to understand the correlation between liver function and the drug metabolism. A detailed explanation for the metabolism of the drugs in liver cirrhosis should also be added. Minor comment; 1. Page 8, Line 3; "was was" should be changed to "was".

COMMENTS TO AUTHORS

The review manuscript by Nakamoto et al. entitled "Antiviral therapies for chronic HCV infection with cirrhosis" adequately describes the current status and problems with antiviral therapies for chronic HCV infection with cirrhosis based on the latest studies. This manuscript is well planned, performed and presented in detail. I have no issues to mention except for only one minor point and think that this is an interesting review manuscript which is worth publishing. Minor point It is preferable to add the patient number in Tables.
