COMMENTS TO AUTHORS

At page six, reference to table 1 is wrong (probably correct to Table 2...) About Reference 21 (Vivarelli et al) dosage of aspirin is not reported (it should be). LMWH needs to be tailored to renal function. It is important to verify if renal function has been evaluated in papers which analyzed the usage of LMWH. This topic earns to be discussed. At large, there are few published papers about this important topic, so a more in-depht analysis of every paper should be realized. Some grammar errors should be corrected.

COMMENTS TO AUTHORS

Hepatic artery thrombosis after liver transplantation is very rare but usually associated with high mortality. The mechanism of this complication is complex, but one important element is early diagnosis. Although the gold standard treatment for this complication is retransplantation, prevention is most important. The topic is very important and includes a fairly broad question of treatment prophylaxis in liver transplantation. As a review article contains too little of the literature, including randomized trials. The title should include the information that this is a manuscript of a review character. The abstract is clear for the reader. The introduction is also clear. Tables should include information about the citation. The paper contains several errors of punctuation.
