COMMENTS TO AUTHORS

This case report is worth to be published because the history of treating chronic hepatitis C is happening right now, and very few case reports we can find in the literature regarding paritaprevir, ombitasvir, dasabuvir, ritonavir, and ribavirin therapy. I have a question for authors regarding the Ribavirin dose that they gave: 400 mg twice daily, because in the Viekira Pak prescribing information the recommended doses are 1000-1200 mg daily. The second issue is that the mathematical modeling is very complicated, very sophisticated, but in my opinion does not explain the sustained viral response in this case with very short duration of therapy. This phenomenon is indeed very interesting, I am very sorry that the authors do not have the RNA viral load at the end of treatment.

COMMENTS TO AUTHORS

The author presents an interesting and valuable case report. Although the mathematical modeling is very complicated, the paper is well organized and worthy of publication.

COMMENTS TO AUTHORS

Manuscript: "HCV cure after DAA-related drug-induced liver injury: case report" My specific queries and comments are below: Please, there are not spaces between words in many parts of the manuscript. Please, page 4, line 4 - The date should be reviewed. The detailed description of the clinical case becomes relevant, especially in the current context of the DAAs' use in clinical practice. The mathematical model is complex and could not be sufficient to explain the data observed in the current study. Can the authors clarify this issue? ? Reviewer conclusion: Accept but needs minor revision.
