## COMMENTS TO AUTHORS

The manuscript entitled `Systemic hemodynamics in advanced cirrhosis: Concerns during perioperative period of liver transplantation` is well-prepared and written. Nice original illustrations much improve an educational content of the paper. Manuscript is a review and analysis of sufficient literature, with proper conclusions and might be recommended for acceptance. However, I would suggest to include some imaging modalities data (with focus on US, Doppler) that are crucial for diagnosis of such conditions and blood flow analysis (for Authors` consideration).
