## COMMENTS TO AUTHORS

1)The review is too simple to describe the role of Wnt signaling in molecular pathogenesis and targeted therapy of CCA. It need to be further supplemented according by the two parts of Wnt signaling in molecular pathogenesis and targeted therapy of CCA. 2) I suggest that the review can be reviewed again after supplementaion .

## COMMENTS TO AUTHORS

This editorial nicely outlines the role of Wnt signaling in the development of cholangiocarcinoma based upon the human tissue and animal studies. The manuscript is well written. Only a minor comment: Page 2, the second last line, "Molecular-targeted therapies hold potential for (personalized) treatment of malignancies including CCA". Can it be clearly stated as "Molecular-targeted therapies hold potential for PERSONALIZED treatment of malignancies including CCA"?

## COMMENTS TO AUTHORS

Thank you to invited me to review this article (Cholangiocarcinoma, gone without the Wnt?) ?These review addressed the prospect for understanding of the molecular pathogenesis of CCA . ?Cholangiocarcinoma is not frequent in cirrhotic Liver ?Wnt signaling cascade raise interest of other recherches for more study in human to decrease the incidence ?In patient with CCA. In the future if we succeeded , Wnt inhibition with or without other line of treatment tiis good achievement
